

ABSTRACT

[problem] Providing a playback apparatus to surely play back a selected medium even when a vehicle mounting the playback apparatus is shaken.

[means for solving the problem] A CD changer 1 is composed of a disk receiver

5 and a separating mechanism 7. The disk receiver is composed of a moving chassis 18 and holders 19 having projections 29. The separating mechanism 7 is composed of a rotating member 25, a moving member 26, and a cam member 24. The moving chassis 18 is mounted on the moving member 26. Second walls 27 are mounted on the rotating member 25 and the moving member 26. The cam

10 member 24 is movable between the moving chassis 18 and the second walls 27 along an arrow K, and is provided with a guiding groove 31 engaged with the projection 29. First and second spaced grooves 39, 40 are respectively formed between the moving chassis 18 and the cam member 24, and between the cam member 24 and the second walls 27.
